At Current Products Corp. we are enhancing the performance, aesthetics, and quality of everyday products.

Our company is new, but our award winning engineering team has over a century of combined engineering and design experience. Founder and CEO Willis Mullet currently holds over 350 patents.

Our products are designed to outlast trends and push the envelope of wireless automation, while changing industry standards.

LEadership

WILLIS MULLET
FOUNDER & CEO

From the design and manufacturing of garage doors to the invention of new and innovating shading systems, Willis Mullet has developed and patented numerous truly revolutionary products. Mr. Mullet has led several companies, including Wayne Dalton Garage Doors and QMotion Shades.

While under the direction of Mr. Mullet, Wayne Dalton raised industry standards by advancing garage door technology to include pinch-resistant sectional joints and a fully enclosed torsion spring counterbalance system. These advancements resulted in a safety commendation by the Consumer Product Safety Commission.

In 2015, the roller shade component of QMotion was acquired by Wattstopper, a division of Legrand Corp. The remaining projects that Mr. Mullet and his team were developing spawned a new company: Current Products Corp.

SCOTT HAND
NEW PRODUCT DEVELOPMENT DIRECTOR

Scott Hand is the Director of New Product Development and the Lead Engineer at Current Products Corp. Mr. Hand has worked with a multitude of world-renowned companies that set new standards for consumer products, such as Chevrolet, Herman Miller, and Steelcase.

While at Herman Miller, Mr. Hand worked extensively on the product development and launch of the ergonomic office chair, Aeron.

From 2000 to 2001, Mr. Hand ventured to Palo Alto, CA to work for the world-class industrial design firm, IDEO. There, he worked on the revolutionary Taylor Made Driver, now a standard on the PGA tour.
Automation is revolutionizing the way we interact with our devices. Our wireless products are designed to be seamlessly integrated into homes and workspaces to enhance the lives of the consumer.

INNOVATIVE
Our revolutionary products are functional and attractive. We look to market trends and user surveys to find the latest in consumer trends.

MINDFUL
Our partners don't know our products as well as we do, so we develop all marketing collateral, marketing materials, and instruction manuals in house then customize them to meet their needs.

VERSATILE
As a research and development company, we are constantly evolving to meet the demands of new technology, market guidelines, and partner requests.

SAVY
We consistently strive to establish good relationships with our suppliers in order to ensure a reliable and continuous flow of raw materials.

EXPERIENCED
Our award winning team of design engineers work in a way that directly reflects our experience and values. We are passionate about building products that truly enhance the life of the user.

THOROUGH
All Current Products Corp. products are rigorously tested for reliability, longevity, safety, and functionality.
By automating the functions of window coverings, our primary product lines conserve energy and increase consumer privacy. We offer solutions for blinds as well as drapery systems.

**E-WAND™**

The E-Wand™ is an innovative solution for automating mini-blinds, venetian blinds, and vertical blinds. This wireless solution is easily installed and programmed, while grouping capabilities allow users to control multiple blinds simultaneously. Light and Temperature Sensors automate movement to increase privacy at night and limit energy expenditures during the day.

**MOTORIZED DRAPERY ROD**

We have a variety of outside diameters, finishes, and rod shapes, and all have easy access battery replacement. In addition to remote controlled movement, control is available through a smart phone app, as well as voice activation.

**MOTORIZED DRAPERY TRACK**

Our track mounted drapery includes ceiling and wall mounted options, along with customized valance options.

**HELICAL DRIVE UMBRELLA**

Not only does our counterbalanced system within our helical drive umbrella eliminate the need for a crank or rope and pulley system found in most outdoor patio umbrellas, it also makes opening and closing simple for people of all ages.
